Project Title

CodeStart – Beginner Programming Learning Platform

Problem Statement

Many beginners who want to learn programming often find it difficult to identify where to start. Learning resources are scattered across multiple websites, which makes it confusing for beginners to find structured guidance. A simple platform that organizes programming resources can help beginners start their coding journey more easily.

Objective

The objective of this project is to create a beginner-friendly website that provides basic information about programming languages, tutorials, and learning resources in a structured format using HTML.

Target Users

- Students who want to start learning programming
- Beginners interested in coding
- College students exploring different programming languages

Planned Pages

1. Home Page

- Introduction to CodeStart
- Overview of programming learning

2. Programming Languages Page

- Information about languages like Python, Java, and C++

3. Tutorials Page

- Beginner tutorials
- Step-by-step learning resources

4. Contact Page

- Contact form
- Feedback from users

Features

- Simple navigation menu
- Information about programming languages
- Lists of tutorials and resources
- Table for comparing programming languages
- Contact form for queries
- Structured semantic HTML elements
